WILLIAM LORENZO - CISSP

wjlorenzo@gmail.com • (719)660-2442 • Colorado Springs, CO • http://www.nullmind.net

I am 20+ year IT industry veteran with a diverse skill set ranging across multiple technology and security domains. I enjoy continuously testing various skills and learning techniques on sites like KodeKloud and TryHackMe. Frequently learning and growing on my home lab and public clouds deploying automated systems and containers while trying new ideas and growing skills with new tools and technologies. U.S. Army Veteran cleared to TS/SCI with an "Information Security First" mindset. Seeking to grow into remote Cyber Architect roles in the cloud space.

EXPERIENCE

Sr. Cyber Security Analyst, Northrop Grumman   June 2020 - Present

Information System Security Officer (ISSO) for a multi-classification development enclave. Primary responsibility for eMASS, Xacta, code review, managing Authorities to Operate/Connect with multiple external communities. Additionally ensure continued compliance with site polices IAW NIST 800-53 Rev 4 and contractual requirements. Monitor and maintain compliance via Tenable.sc, SCC/SCAP, and Ansible. Coordinate with external agencies for various mission taskings and requirements gathering.

Sr. Principal Systems Engineer, Raytheon   December 2016 - June 2020

Principal Engineer developing Ansible and Python based automated solutions to reduce delivery times and ensure continued baseline compliance. Program wide Ansible SME writing and reviewing modules, roles, and playbooks to meet continuous test (GitLab) and delivery objectives across the enterprise. Technical lead of team that developed a custom automated compliance unit to address all compliance items with consideration of risk management policies. Worked across agile teams to ensure sprint objectives remained on track in a Windows and Linux Enterprise.

Professional Services Consultant, Strategic Business Systems   August 2015 - December 2016

Professional Services team member supporting post-sales implementation of NetApp storage systems with VMware infrastructure. Assisted local staff with transitioning environments to newly purchased technologies. Created full implementation plans from end-to-end covering migration of all relevant systems and technologies to new solutions. Developed custom training and documentation for each customer related to new technology implementations and integrations to existing systems and workflows. Additionally assisted Pre-Sales team with design and meeting coordination to ensure year-over-year growth.

Enterprise Architect, TEK Systems   February 2015 - August 2015

Enterprise Architect for NORAD USNORTHCOM IT Services. Provided technical oversight for all projects and proposals to ensure designs are in line with contractual and business requirements. Primary technical resource for project managers and staff engineers to validate designs and implementation plans. Created and maintained high level enterprise technical documentation to include white papers, service design, release design, and transition documentation. Coordinated product research and testing to validate design objectives.

Storage and Virtualization Engineer, Intelligent Software Solutions   July 2012 - February 2015

Managed multiple vCenter instances and related NetApp storage in a Cisco UCS platform. Similarly responsible for Linux and Windows Administration to include Active Directory. Administered Atlassian products in support of a DevOps organization.

Senior Systems Analyst, Lockheed Martin   November 2011 - July 2012

Responsible for all systems and network connectivity design used by an operations team comprised of Government and Contract employees. Ensure Department of Defense security regulations compliance as allowed by the operations team lead. Advised best practices and DoD system management procedures to ensure system availability to 24x7 operational mission staff.

Senior Systems Administrator, Northrop Grumman   June 2008 - November 2011

Provide comprehensive server, desktop, and network administration on both Windows and Linux platforms.

Systems and Network Engineer, PCI Broadband   October 1999 - June 2008

Sole Systems and Network Administrator for a local Internet Service Provider. Managed all devices and ensured external connectivity and peering with upstream providers. Managed all Unix systems to ensure continued mail, web and other services for residential and business customers.
