

WILLIAM LORENZO - CISSP

wjlorenzo@gmail.com • (719)660-2442 • Colorado Springs, CO

PROFESSIONAL SUMMARY

Cybersecurity professional and CISSP with 20+ years of experience spanning enterprise security, cloud platforms, infrastructure, and DevSecOps/Secure SDLC. Experienced bridging engineering, operations, and leadership teams to integrate security into modern application delivery environments while aligning with business and regulatory requirements. Proven track record of identifying tooling deficiencies to drive platform modernization and eliminate cybersecurity delivery blockers. Previously held TS/SCI clearance supporting defense and operational mission environments. Continually leverage automation and AI-assisted workflows to accelerate research, analysis, documentation, and security engineering activities.

CORE COMPETENCIES

• Security Architecture	• Secure SDLC / DevSecOps	• Automation & Compliance
• Software Security (SAST/SCA/IaC)	• Vulnerability Management	• AWS Cloud Security
• GitLab CI/CD Pipelines	• NIST RMF / STIG Compliance	• Linux / Windows Infrastructure

EXPERIENCE

Southwest Airlines

Solutions Architect | November 2024 – Present

Solutions Architect tasked with modernizing enterprise Application Security and Cloud Security platforms while eliminating pipeline delivery bottlenecks caused by legacy tooling and practices. Partnering across engineering, platform, operations, and cybersecurity teams to integrate security into software development and CI/CD delivery workflows while aligning governance, risk management, and security practices.

- Architected automated and attested security guardrails within enterprise GitLab CI/CD pipelines, executing a modernization strategy to migrate from legacy Veracode and ad-hoc AWS/Palo Alto configurations to an integrated Snyk and CrowdStrike ecosystem with ServiceNow based compliance tracking.
- Eliminate technical delivery blockers and accelerate pipeline velocity, leveraging historical data on tooling deficiencies to optimize the security toolchain, significantly reducing remediation timelines across several hundred engineering teams.
- Contribute to enterprise architecture roadmaps for Cloud and SDLC security, delivering strategic guidance to executive leadership for modernization and security impacting decision making.
- Steer the evolving design, implementation, and enterprise-wide operationalization of vulnerability management, application security, and cloud security platforms.
- Collaborate across engineering, architecture, director, and executive leadership groups to balance technical security requirements with operational efficiency, delivery objectives, and engineering workflows.

Southwest Airlines

Senior Cybersecurity Analyst | January 2023 – November 2024

Senior Application Security member supporting enterprise application security initiatives including vulnerability management, secure SDLC practices, application security tooling, and risk analysis activities within large-scale enterprise environments.

- Identified critical platform deficiencies within legacy ad-hoc Palo Alto Networks products and legacy Veracode tooling, documenting pipeline delivery friction and framing the business case for enterprise stack modernization.
- Assisted in developing enterprise vulnerability remediation pipelines, shifting application testing from legacy environments into early-stage automated testing workflows.
- Partnered with distributed development teams to assess, prioritize, and remediate high-risk vulnerabilities without degrading sprint velocity.

Northrop Grumman

Sr. Principal Cyber Security Analyst | June 2020 – January 2023

- Directed vulnerability analysis and remediation strategy for high-consequence operational and test enclaves within a defense mission context.
- Briefed executive stakeholders on mission-critical risk postures and prioritized mitigations across multiple concurrent defense initiatives.

Raytheon

Principal Systems Engineer | December 2016 – June 2020

Principal Engineer focused on development of automated solutions supporting baseline compliance, continuous delivery, and operational efficiency initiatives.

- Served as program-wide Ansible SME responsible for the development and review of modules, roles, and playbooks supporting enterprise automation objectives.
- Spearheaded the design and development of a custom automated STIG enforcement engine, programmatically resolving complex compliance baselines across hybrid Linux/Windows environments while managing POA&Ms and waivers.
- Worked across agile teams to ensure sprint objectives remained on track in a mixed Windows and Linux environment.

Strategic Business Systems

Professional Services Consultant | August 2015 – December 2016

- Supported post-sales implementation of NetApp storage systems and VMware infrastructure, assisting local staff with transitioning environments to newly purchased technologies.
- Created full end-to-end implementation plans covering the migration of all relevant systems and technologies to new solutions.
- Developed custom training and documentation for each customer related to new technology implementations and integrations to existing systems and workflows.
- Assisted Pre-Sales team with design and meeting coordination to ensure year-over-year growth.

TEK Systems

Enterprise Architect | February 2015 – August 2015

Enterprise Architect for NORAD USNORTHCOM IT Services.

- Provided technical oversight for all projects and proposals to ensure designs aligned with contractual and business requirements.
- Served as primary technical resource for project managers and staff engineers to validate designs and implementation plans.
- Created and maintained high-level enterprise technical documentation including white papers, service design, release design, and transition documentation.
- Coordinated product research and testing to validate design objectives.

EARLY CAREER HISTORY

- **Intelligent Software Solutions** | *Storage and Virtualization Engineer* | July 2012 – February 2015
- **Lockheed Martin** | *Senior Systems Analyst* | November 2011 – July 2012
- **Northrop Grumman** | *Senior Systems Administrator* | June 2008 – November 2011
- **PCI Broadband** | *Systems and Network Engineer* | October 1999 – June 2008
- **United States Army** | *Intelligence Analyst (96B - 10th Special Forces Group)* | December 1995 – June 1999
